## 1 Introduction

Welcome to the UUU (Universal Update Utility). This is an evolution of MFGTools (aka MFGTools v3).

UUU is Freescale/NXP I.MX Chip image deploy tools.

With the time, the need for an update utility portable to Linux and Windows increased. UUU have the same usage on both Windows and Linux. It means the same script works on both OS.

#### UUU is command line tools. look like

```
uuu (universal update utility) for nxp imx chips -- libuuu-1.0.1-gffd9837

Succues:0 Failure:3 Wait for Known USB Device Appear...

1:11 5/5 [
    ivtinitramf....
2:1 1/5 [===> ] SDP: boot -f u-boot-imx7dsabresd_sd. ←
    imx ....
```

UUU design as common library and UI. So user can easily integrate into their tools with uuu library. UUU also easy run in any scripts.

PDF of wiki content also is available at release page.

## 1.1 Running environment

- Windows 10, 64bit, early version(below 1.2.0) need install vs2017 redistribute package
- Ubuntu 16.14 or above, 64bit

Windows 7 user please read WIN7-User-Guide

## 1.2 Typical Usage

Set board boot pin to serial download mode. Generally iMX ROM will fail back to usb serial download mode if boot failure.

#### Download uboot

```
uuu bootloader
```

#### Burn uboot into emmo

```
uuu -b emmc bootloader
```

#### Burn rootfs image into emmc

```
uuu -b emmc_all bootloader rootfs.sdcard
```

Decompress rootfs image and burn into emmc (since 1.1.87)

```
uuu -b emmc_all bootloader rootfs.sdcard.bz2/*
```

Notes: bootloader means bootable image, which included ROM required header. for imx6/7, it should be uboot.imx generally. for imx8qxp\imx8qm\imx8mm\im8mq, it is flash.bin.

Burn release image into emmc

```
uuu L4.9.123_2.3.0_8mm-ga.zip
```

Note: some release combine multi board into one zip package, you need use uuu release.zip/uuu.auto-<box>

More usage please refer Example

## 1.3 Typical Script

uuu's script is plain text file

\*\*first line must be

```
uuu_version 1.0.1
```

Version show minimize version of uuu to run this script.

Then flow uuu commands.

UUU command format as

PROTOCOL: CMD

The below is example to boot uboot for imx6 and imx7.

```
uuu_version 1.0.1
SDP: dcd -f u-boot.imx
SDP: write -f u-boot.imx -ivt 0
SDP: jump -f u-boot.imx -ivt 0
```

more sample scripts see Sample-script

The below table environment may be used when write uuu script

Table 1: Table Fastboot environment

Variable	Description
fastboot_dev	fastboot flash device, support mmc and sata
fastboot_buffer	fastboot download buffer adddress
fastboot_bytes	fastboot download file size
emmc_dev	eMMC device number
sd_dev	sd slot device number

#### 1.4 License

uuu is licensed under the BSD license. See LICENSE. The BSD licensed prebuilt Windows binary version of uuu is statically linked with the LGPL libusb library, which remains LGPL.

- bzip2 (BSD license) is from https://github.com/enthought/bzip2-1.0.6
- zlib (zlib license) is from https://github.com/madler/zlib.git
- libusb (LGPL-2.1) is from https://github.com/libusb/libusb.git

#### 1.5 What Firmware Need

What you want	Firmware Need
Download bootloader	N/A
Burn Image to eMMC/SD	uboot with fastboot enable
Burn Image to qspi\spi\nor	uboot with fastboot enable
Burn Image into Nand flash	uboot(1), linux kernel\initramfs\uboot\dtb
Need linux shell cmd such as fdisk	uboot(1), linux kernel\initramfs\uboot\dtb
Boot linux kenrel with rootfs already in eMMC	uboot with fastboot enable
Boot Linux kernel with nfs over USB	uboot with fastboot enable, initramfs

(1) prefer enable fastboot. If ROM HID support write additional image to DDR place, you can write kernel\dtb\initramfs to ddr before jump to uboot. Enable fastboot give more flexibility to change kernel command line.

## 1.6 Setup auto parameter complete

#### 1.6.1 windows

Just power shell support customized auto complete

Powershell: Enjoy auto [tab] command complete by run below command or put into Documents\WindowsPowerShell\Microsoft.PowerS

```
Register-ArgumentCompleter -CommandName uuu -ScriptBlock {param($commandName, ← $parameterName,$wordToComplete,$commandAst,$fakeBoundParameter); C:\Users\ ← nxa23210\uuu\uuu\x64\Release\lib\uuu.exe -autocomplete $parameterName }
```

#### 1.6.2 linux

Enjoy auto [tab] command complete by put below script into /etc/bash\_completion.d/uuu

```
_uuu_autocomplete()
{
     COMPREPLY=($(/home/lizhi/source/mfgtools/uuu/uuu $1 $2 $3))
}
complete -o nospace -F _uuu_autocomplete uuu
```

## 1.7 L4.9.123 2.3.0 8MM GA

It is first official BSP release to support uuu For L4.9.123\_2.3.0\_8MM GA with i.MX8M Mini, see [?]

# 2 Syntactic

```
uuu (Universal Update Utility) for nxp imx chips -- libuuu_1.1.87-7-gad2ec1f
uuu [-d -m -v -V] <bootloader|cmdlists|cmd>
    bootloader download bootloader to board by usb
    cmdlist
                run all commands in cmdlist file
                If it is path, search uuu.auto in dir
                If it is zip, search uuu.auto in zip
    cmd
                Run one command, use -H see detail
                example: SDPS: boot -f flash.bin
    -d
                Deamon mode, wait for forever.
    -v -V
                verbose mode, -V enable libusb error\warning info
                USBPATH Only monitor these pathes.
    -m
                    -m 1:2 -m 1:3
                Enter shell mode. uuu.inputlog record all input commands
111111 -S
                you can use "uuu uuu.inputlog" next time to run all commands
uuu -h -H
                show help, -H means detail helps
uuu [-d -m -v] -b[run] <emmc|emmc_all|qspi|sd|sd_all|spl> arg...
        Run Built-in scripts
```

```
burn boot loader to eMMC boot partition
        emmc
                arg0: _flash.bin
        emmc_all
                        burn whole image to eMMC
                arg0: _flash.bin
                arg1: _rootfs.sdcard
                burn boot loader to qspi nor flash
        qspi
                arg0: _flexspi.bin bootloader
                arg1: _image[Optional] image burn to flexspi, default is the s \leftrightarrow
                                                 ame as bootloader
                burn boot loader to sd card
        sd
                arg0: _flash.bin
        sd_all burn whole image to sd card
                arg0: _flash.bin
                arg1: _rootfs.sdcard
                boot spl and uboot
        spl
                 arg0: _flash.bin
uuu -bshow <emmc|emmc_all|qspi|sd|sd_all|spl>
        Show built-in script
 Command Format PROTOCOL COMMAND ARG
 PROTOCOL
          ALL protocol supported common command
                       done
                                   #last command for whole flow
                       delay <ms> # delay ms
                       sh\shell <any shell command> \#Run shell command, such as \longleftrightarrow
                                                        wget to file from network
                                 <any shell command> \#use shell command's output \leftrightarrow
                                                        as uuu command
                                 this command generally used for burn some sequen \leftarrow
                                                                 ce number, such \leftarrow
                                    production id, mac address
                                  for example:
                                        FB: < echo ucmd print
          CFG: Config protocol of specific usb device vid/pid
                 SDPS|SDP|FB\Fastboot|FBK -chip <chip name> -pid <pid> -vid <vid \leftrightarrow
                                                 > [-bcdversion <ver>]
          SDPS: Stream download after MX8QXPB0
                       boot -f <filename> [-offset 0x0000]
          SDP: iMX6/iMX7 HID download protocol.
                       dcd -f <filename>
                       write -f <filename> [-addr 0x000000] [-ivt 0]
                       jump -f <filename> [-ivt 0]
                       boot -f <filename> [-nojump]
          FB[-t timeout]:\Fastboot: android fastboot protocol. unit of timeout \leftrightarrow
                                            is ms
                       getvar
                       ucmd <any uboot command>
                       acmd <any never returned uboot command, like booti, reboo \leftrightarrow
                       flash [-raw2sparse] <partition> <filename>
                       download -f <filename>
```

```
FBK: community with kernel with fastboot protocol. DO NOT compatible \,\,\,\,\,\,\,\,\,\,\,\,\,\,
                                           with fastboot tools.
                      ucmd <any kernel command> and wait for command finish
                      acmd <any kernel command> don't wait for command finish
                                                  wait for acmd processs finish.
                      sync
                      ucp <soure> <destinate>
                                                  copy file from/to target
                                                  T:<filename> means target board ←
                                                      file.
                                                  T:- means copy data to target's \leftarrow
                                                      stdio pipe.
                                                  copy image T:/root/image ;downl ←
                                                                                   oad ←
                                                      image to path /root/image
                                                  copy T:/root/image image ;uploa \leftarrow
                                                                                   d / ←
                                                      root/image to file image.
                      Example for transfer big file
                               acmd tar -
                                                      ; run tar background and ge \ \leftarrow
                                                               t data from stdio
                               ucp rootfs.tar.gz T:- ; send to target stdio pipe
                                                      ; wait for tar process exit \leftarrow
                               sync
For example:
         SDPS: boot -f <filename>
         SDP: boot -f <filename>
         CFG: SDP: -chip imx6ull -pid 0x1234 -vid 0x5678
SDP: boot -f u-boot-imx7dsabresd_sd.imx -nojump
SDP: write -f zImage -addr 0x80800000
SDP: write -f zImage-imx7d-sdb.dtb -addr 0x83000000
SDP: write -f fsl-image-mfgtool-initramfs-imx_mfgtools.cpio.gz.u-boot -addr 0x \leftrightarrow
                                83800000
SDP: jump -f u-boot-dtb.imx -iv
```

# 3 Usage Example

### 3.1 Basic

#### 3.1.1 Download boot loader for imx6\imx7

uuu uboot.imx

#### 3.1.2 Download boot loader for imx8qxp

uuu flash.bin

#### 3.1.3 Download SPL and uboot, such as imx8mq.

```
uuu sdp: boot -f flash.bin
uuu sdpu: delay 1000
uuu sdpu: write -f flash.bin -offset 0x57c00
uuu sdpu: jump
```

#### 3.1.4 Burn Android Image to eMMC

```
uuu android.zip (not implement default yet)
```

#### 3.1.5 Burn yocto Image to eMMC

```
uuu L4.9.123_2.3.0_8mm-ga.zip
```

## 3.2 Built-in script

```
uuu -b emmc bootloader
                                                 Write bootloader to emmc
uuu -b emmc_all bootloader rootfs.sdcard
                                                 Write rootfs to emmc
uuu -b emmc_all bootloader rootfs.sdcard.bz2/*
                                                 Decompress rootfs and write \leftarrow
   rootfs to emmc
uuu -b sd bootloader
                                                  Write bootloader to sd card
uuu -b sd_all bootloader rootfs.sdcard
                                                  Write rootfs to sd card
uuu -b sd_all bootloader rootfs.sdcard.bz2/*
                                                 Decompress rootfs and write \leftarrow
   rootfs to sd card
uuu -b qspi qspi_bootloader
                                                  write bootloader to qspi
uuu -b qspi qspi_bootloader m4image
                                                  write m4image to qpsi
uuu -b spl bootloader
                                                  Download SPL and uboot
```

## Notes:

```
Some boards have many sd slot. built-in script only work uboot environment \{ \leftarrow \text{sd\_dev} \} point to slot Some boards have not emmc chip, emmc build in script does not work for such boards
```

## 3.3 multi boards support

#### 3.3.1 For the same boards

```
uuu -d uuu.auto The same boards connected
```

## 3.3.2 For the difference boards

Note: please avoid monitor the same port by difference uuu instance, which cause unexpected result.

## 3.4 Talk with fastboot

#### 3.4.1 boot linux kernel

```
uuu FB: ucmd setenv fastboot_buffer ${loadaddr}
uuu FB: download -f Image
uuu FB: ucmd setenv fastboot_buffer ${fdt_addr}
uuu FB: download -f imx8qxp_mek.dtb
uuu FB: acmd booti ${loadaddr} - ${fdt_addr}
```

## Extended environment for fastboot

## 3.4.2 write image to emmc

```
uuu FB: flash -raw2sparse all <image file>
```

# 4 Sample scripts

# 5 Supported protocol

UUU is scripted base multi protocol system.

## Built in config:

Pctl	Chip	Vid	Pid	BcdVersion
SDPS:	MX8QXP	0x1fc9		[0x00020xffff]
SDPS:	MX8QM	0x1fc9	0x0129	[0x00020xffff]
SDP:	MX7D	0x15a2	0x0076	
SDP:	MX6Q	0x15a2	0x0054	
SDP:	MX6D	0x15a2	0x0061	
SDP:	MX6SL	0x15a2	0x0063	
SDP:	MX6SX	0x15a2	0x0071	
SDP:	MX6UL	0x15a2	0x007d	
SDP:	MX6ULL	0x15a2	0x0080	
SDP:	MX6SLL	0x1fc9	0x0128	
SDP:	MX7ULP	0x1fc9	0x0126	
SDP:	MXRT106X	0x1fc9	0x0135	
SDP:	MM8XM	0x1fc9	0x0134	
SDP:	MX8MQ	0x1fc9	0x012b	
SDPU:	SPL	0x0525	0xb4a4	[0x00000x04ff]
SDPV:	SPL1	0x0525	0xb4a4	[0x05000xffff]
FBK:		0x066f	0x9afe	
FBK:		0x066f	0x9bff	
FB:		0x0525	0xa4a5	
FB:		0x18d1	0x0d02	

Table 2: Table UUU Protocol to USB lower level Map

UUU Protocol	USB Low level transfer
SDP	HID i.MX6/7, i.MX8 MM, i.MX8M
SDPU\SDPV	HID uboot implement of SDP, SPL download uboot
SDPS	HID i.MX8QXP i.MX8QM
FB	winusb (windows), raw transfer by libusb
FBK	winusb (windows), raw transfer by libusb

## 5.1 SDP: i.MX6/7 ROM download protocol

#### 5.1.1 Supported command:

```
Run DCD from image with ivt header
```

```
dcd -f <filename>
```

write image to address.

```
write -f <filename> [-addr 0x000000] [-ivt 0]
```

ivt 0 means write to the address, which ivt pointer

jump to image with ivt header

```
jump -f <filename> [-ivt 0]
```

boot image, include (dcd, write and jump three commands)

```
boot -f <filename> [-nojump]
```

### 5.2 SDPU\SDPV: uboot implement simplified ROM SDP protocol

Uboot implemented i.MX 6/7 ROM SDP protocol. The support command the same as SDP.

SDPV is upgrade version of SDPU, which support -skipspl option for write command

See below for uboot requirement uboot-config-requirement

## 5.3 SDPS: i.MX8QXP and i.MX8QM ROM download protocol

send image by sdp command.

```
boot -f <filename> [-offset 0x0000]
```

## 5.4 FB: Android fastboot protocol

refer fast boot protocol

See below for uboot requirement

#### 5.4.1 Support command:

```
getvar
ucmd <any uboot command>
acmd <any never returned uboot command, like booti, reboot>
# partition "all" means whole device.
flash [-raw2sparse] <partition> <filename>
download -f <filename>
```

\*\*Some Uboot command need long time to finish. Default FB timeout is 2s. You can use below method to change timeout value

```
# time out set to 10000ms
FB[-t 10000]: ucmd <any uboot command>
```

Table 3: Table Fastboot environment

Variable	Description
fastboot_dev	fastboot flash device, support mmc and sata
fastboot_buffer	fastboot download buffer adddress
fastboot_bytes	fastboot download file size
emmc_dev	eMMC device number
sd_dev	sd slot device number

## 5.5 FBK: Android fastboot protocol, implement at initramfs. See project imx-uuu

#### 5.5.1 Support command:

## Example for transfer big file

#### Linux environment:

Each command in separate process so environment can not be affect next command. Use below method to workaround this problem.

```
FBK: ucmd source /tmp/mtd.sh; flash_erase /dev/mtd${nandrootfs} 0 0
```

## 5.6 Common command for all protocol

Table 4: Table Common command for all protocol

Command	Description
Done	last command for finish whole flow.
Delay	Busy wait for millisecond
SH/SHELL	run external command
<	stdout as command, such as "< echo ucmd print", which
	generally used for burn serial number

# 6 Migration from mfgtool ucl2.xml

In case you have to load kernel to burn whole image.

The below simple map ucl2.xml to uuu script.

10 1	
ucl2.xml	uuu
<cmd <="" body="BootStrap" state="BootStrap" td="" type="boot"><td>SDPS: boot -f flash.bin</td></cmd>	SDPS: boot -f flash.bin

# 7 Win 7 User Guide

Win7 user may face some additional one time setup work because original win7 missed a updated .inf file

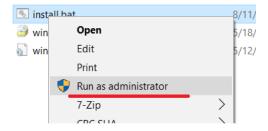

#### 7.1 Back Ground

Win7 ships with correct *winusb.sys* file. but is missing an updated *.inf* that associates with "usb\ms\_comp\_winusb" devices. Normally if the USB device supports Microsoft OS descriptors, then it will allow Windows to automatically install the WinUSB driver. This mechanism is supported "in-box" for Win8 and newer. For Win7 the mechanism is supported through Windows update. Depending on the update policy for the Win7 machine, the appropriate driver may or may not be already available on the machine. If it is not already on the machine, user can use the following manual procedure to install the driver if necessary. (copy from https://www.silabs.com/community/interface/knowledge-base.entry.html/2017/02/06/manually\_installwin-A2Ji")

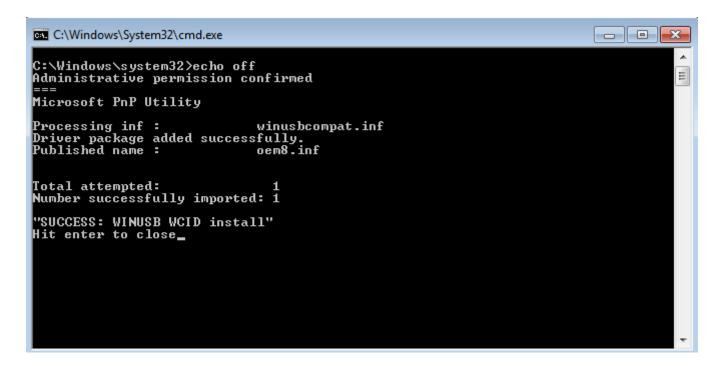

Some windows update also included updated .inf file. You can try run uuu to see what happen. If windows report "can't install driver", that means your system missed such update file.

## 7.2 Install updated winusb inf file

- · Download package
- unzip
- run install.bat as administrator permission.

• The below screen show install success

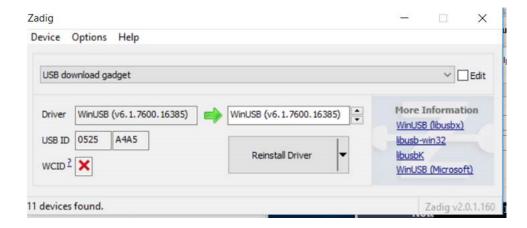

#### **Notes:**

4.9.123 8MM GA and 4.14 beta release missed a patch. Please apply below patch in uboot

## 7.3 Use zadig to install winusb driver

If still fail install winusb driver you can try below method. you can try download zadig from https://zadig.akeo.ie/ Choose **USB download device** and click install.

If you already apply patch and still see WCID is red "x", please submit issue.

## 8 FAQ

- · Win7 can't found driver
  - Need install winusb driver, you can use https://zadig.akeo.ie/ to install winusb driver
  - see page WIN7-User-Guide
- Linux: Open device failure

sudo uuu xxx

### • Some iMX8mm(845) chip failure write at linux system

Need apply ROM patch, contact FAE to get it.

## • How to use absolute path in scripts

```
Default all paths in script is related uuu scripts. if you want to use absolute ← path in scripts

Add ">" in path like
```

>/home/xxx

#### · uuu exit silence or report missed dll

Please upgrade to 1.2.x

#### · How to avoid sudo in linux

Put below context into /etc/udev/rules.d/99-uuu.rules (need sudo)

```
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="012f", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="0129", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0076", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0054", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0061", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0063", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0071", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="007d", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="15a2", ATTRS{idProduct}=="0080", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="0128", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="0126", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="0135", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="0134", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="1fc9", ATTRS{idProduct}=="012b", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="0525", ATTRS{idProduct}=="b4a4", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="0525", ATTRS{idProduct}=="a4a5", MODE="0666"
SUBSYSTEM=="usb", ATTRS{idVendor}=="0666", ATTRS{idProduct}=="9BFF", MODE="0666"
```

run sudo udevadm control --reload-rules

uuu -udev can show above help.

#### · How to get file in zip without decompress

```
Assume there are file name uuu.auto in A.zip file.

A.zip/uuu.auto

for example:

uuu A.zip/uuu.auto
```

#### How to send out uncompress bz2

```
Added /* after bz2 file

for example

uuu -b emmc_all <bootloader> sdcard.bz2/*
```

## • Boot fail after burn > 4G Image

```
uboot need below patch
```

#### · WCID failure load

#### Apply below uboot patch

```
diff --git a/drivers/usb/gadget/f_fastboot.c b/drivers/usb/gadget/f_fastboot.c
index ae8fe80..cd46ca4 100644

# 9 Build Steps

#### 9.1 windows

- download visual studio 2017 community version (free)
- git clone https://github.com/NXPmicro/mfgtools.git
- cd mfgtools
- git submodule init
- git submodule update
- open msvs/uuu.sln by vs2017
- · click build

#### 9.2 linux

- git clone https://github.com/NXPmicro/mfgtools.git
- · cd mfgtools
- sudo apt-get install libusb-1.0.0-dev libzip-dev libbz2-dev
- cmake
- make

# 10 Uboot config requirement

To talk with uuu, uboot need enable fastboot. fastboot need auto run when detect boot from USB.

```
CONFIG_CMD_FASTBOOT=y
CONFIG USB FUNCTION FASTBOOT=y
CONFIG_USB_GADGET=y
CONFIG_USB_GADGET_DOWNLOAD=y
CONFIG_USB_GADGET_MANUFACTURER="FSL"

#### Additional environment need be define

Table 5: Table uuu environment

Variable	Usage	Description
emmc_dev	emmc burn	eMMC device number
sd_dev	burn sd	sd slot device number
kboot	boot kernel\burn nand	kernel boot command, it is booti for
		arm64, bootz for arm32
weim_uboot	burn weim nor	uboot burn to position of weim nor
weim_base	burn weim nor	weim base address
mtdparts	burn nand	NAND flash partition configuration,
		such as
		"mtdparts=8000000.nor:1m(boot),-
		(rootfs)\\;gpmi-
		nand:64m(nandboot),16m(nandkernel),16m(nan
		(nandrootfs)
		"
spi_bus	burn spi (not qspi\fspi)	spi nor flash bus number
spi_uboot	burn spi (not qspi\fspi)	spi nor flash uboot offset

# 11 kernel config requirement

Some kernel config required

- USB CONFIG FS need be built-in
- One of UDC driver and PHY need be built-in
- Funnction FS need be enabled

```
Device Drivers
USB support
USB gadget support (very last entry)
USB Gadget Drivers (...)
USB functions configurable through configfs
Mass storage
Function filesystem (functionFS)
```

## 12 Release Notes

## 12.1 1.2.TBD (Next)

## 12.1.1 New features

• Auto parameter complete support

- Add option -udev to help create udev rule to avoid use sudo
- Remove VT color at win7
- Fail back to verbose mode at win7
- Enable uboot shell mode
- Just print help when run uuu
- Added blog command to fetch message from uboot boot log
- Support file path include space. need add "" at file path
- Windows version built-in libusb
- New SDPV support to support -skipsql for uboot, which support auto scan uboot position.

## 12.1.2 Bug fixes

- Fixed uuu "fb[-t 1000]:" ucmd wait forever problem
- Fixed missed sdpu: done at spl built in script
- Fixed show nothing when wait for usb connection
- Fixed random claim interface failure at windows platform
- Fixed random crash when multi-device download at windows platform
- Fixed memory leak.
- Fixed #79 file all zero when ucp from target to host
- · Fixed crash when done is not last cmd

## 12.2 1.2.0

#### 12.2.1 New features

- Support decompress bz2 file, sdcard.bz2/\* means decompress it.
- Support enter shell after run script

## 12.2.2 Bug fixes

- Fix mx6 boot failure when enable security
- Fix windows version dependent on vs redistribute package

#### 12.3 1.1.81

## 12.3.1 New features

- · Support shell command
- Support shell command generate dynamic uuu command to burn sequence id, like MAC address
- Reduce cpu usage rate at windows platform by increase each bulk transfer size
- Added q(quit) to exit shell at -s mode

## 12.3.2 Bug fixes

- · fixed some typo
- fixed build script qspi burn failure if file size > 1M
- fixed file locked by uuu to prevent user update it.
- fixed crash at special uboot size

### 12.4 1.1.41

#### 12.4.1 New features

- Support SDP protocol (i.MX6x, i.MX7, i.MX8M, i.MX8MM)
- Support SDPS protocol (i.MX8QXP B0, i.MX8QM B0)
- Support SDPU protocol (uboot\SPL implemented SDP protocol)
- Support FB protocol (fastboot with uboot)
- Support FBK protocol (fastboot in kernel, daemon implement at imx-uuc)
- Support multi-device download
- Support built-in script

## 12.4.2 Bug fixes

- Fix sometime open usb device failure at windows platform.
- Fix protocol case sensitive problem in script
- Fix open zip file failure

## 13 Known issue

- some old i.MX8MM board HID can't work in linux system. Need apply ROM patch to fix. Please contact FAE.
- QXP/QM NAND image can't download by UUU because alignment requirement is difference
